

Birdie Bike Service

Have you been riding your bike more frequently these days? Maybe you've noticed that it doesn't quite shift as easily as it once did or that it makes a noise you don't remember hearing before. It is recommended that bikes be serviced at least once a year and more frequently if ridden often. Bike chains, if not replaced when worn, can cause damage to other drivetrain items on your bike (rear cassette, chain rings, etc). So, it could be time to schedule your bike for a tune-up. And now, right here in SaddleBrooke, **Birdie Bike Service** can assess and repair many of your bike's issues.

Birdie Bike Service also works on recumbent bikes and trikes—which is particularly convenient since the closest shop for recumbents is down by the Tucson airport. My wife, Shirley, and I have been riding our trikes for 7 years and over the past few years we've seen more and more trikes in SaddleBrooke. We recommend them for both comfort, stability, and fun! I'm sure you have seen us with our little dog Roxie riding in a basket. Our pedal assist set up allow us to travel 50+ miles between recharges.

Chain Check Saturday! On the first Saturday of every month **Birdie Bike Service** will be at the CycleMaster's Saturday ride 1/2 hour before start time to check bike chains for wear. We will also be available to discuss any bike issues you might be having.

I invite you to contact me if I can be of service to restore your troubled bike to smooth operation once again.
